

# MicroBook Read Me

## OVERVIEW

Thank you for choosing the MOTU MicroBook. This document provides late-breaking information about the MicroBook not included in the *MicroBook User Guide*.

## SYSTEM REQUIREMENTS

### Mac

- PowerPC G4 CPU 1 GHz or faster (including PowerPC G5 CPUs and all Intel processor Macs)
- 512 MB of RAM; 1 GB or more is recommended
- Mac OS X version 10.5 or 10.6; v10.5.6 or later is required.
- A large hard drive, preferably at least 100 GB

### Windows

- Pentium 4 CPU (or equivalent) 1 GHz or faster
- 512 MB of RAM; 1 GB or more is recommended
- Windows 7, Vista, or XP, 32- or 64-bit
- A large hard drive, preferably at least 100 GB

## TIPS FOR CONNECTING EXTERNAL DEVICES

Follow these simple guidelines to minimize noise that may be produced by external devices connected to the MicroBook:

- Use balanced TRS quarter-inch cables whenever possible. Balanced connections greatly reduce noise resulting from electrical interference.
- Use the MicroBook's balanced quarter-inch connectors instead of the eighth-inch stereo "mini" connectors whenever possible.
- Don't make unbalanced audio connections between the MicroBook and a FireWire or USB device while the other device is connected to any computer, as this could significantly reduce the audio quality performance of the MicroBook.

## COMMENTS AND SUGGESTIONS

We hope you enjoy using the MOTU MicroBook. We welcome your comments and suggestions:
